Reasons for Allowance

- 1. Claims 1-23 are allowed.
- 2. The following is an examiner's statement of reasons for allowance:

The cited prior art taken alone or in combination fails to teach the claims invention of a system for classifying packets, wherein each packet has N header fields to be used for processing is provided, the system comprising a first set of rules associating to the packets by values of the header fields; and a classification system for selecting specific rules in the set of rules as applicable to a specific packet. The system is characterized in that the classification system projects the first set of rules as Ndimensional entities on N Axes in N-dimensional space, marking the beginning and ending value on each axis for each rule as a breakpoint, numbers intervals between breakpoints in sequential binary numbers, associated a subset of the first set of rules as applicable in each interval between breakpoints on each axis, then considers a packet as a point in the N-dimensional space according to its header field values, locates the binary numbered interval into which the point projects on each axis by performing a search on each axis for the numbered interval into which the point projects on that axis, thereby determining rules applicable to the packet for that axis and then determines the specific rules applicable to the packet from the subsets of rules by selecting those rules as applicable to the packet that apply to the packet on all of the N Axes.

The closest prior art (Lakshman, ACM 1-58113-003) teaches "High-Speed Policy-based Packet Forwarding Using efficient Multi-dimensional Range Matching" wherein intervals are numbered using the same number of bits as those used for axis

Application/Control Number: 09/586,115

Art Unit: 2121

values. Applicant's invention assigns one of a sequence of binary numbers to each interval between breakpoints such that all adjacent intervals are numbered in ascending sequential binary order and such that each of the binary interval numbers has a number of bits that is less than the number of bits for the axis values corresponding to the breakpoints. Applicant's assignment of numbers results in fewer bits must be dealt with when performing a search to determine the binary interval into which a packet point projects on an axis...search can be faster.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Correspondence Information

Any inquiry concerning this information or related to the subject disclosure should be directed to the Examiner, Joseph P. Hirl, whose telephone number is (571) 272-3685. The Examiner can be reached on Monday – Thursday from 6:00 a.m. to 4:30 p.m.

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's supervisor, Anthony Knight can be reached at (571) 272-3687.

Any response to this office action should be mailed to:

Commissioner of Patents and Trademarks,

Washington, D. C. 20231;

or faxed to:

(703) 872-9306 (for formal communications intended for entry);

or faxed to:

(571) 273-3685 (for informal or draft communications with notation of "Proposed" or "Draft" for the desk of the Examiner).
